

AI Reputation Analysis and Signal Evaluation - Nintendo (Paper Mario)

BRAND AI REPUTATION

Arts, Culture & Entertainment Reputation: Nintendo (Paper Mario) (papermario.nintendo.com)

https://papermario.nintendo.com

Industry: Arts, Culture & Entertainment

ARTS, CULTURE & ENTERTAINMENT

67.5 Avg Reputation

Based on 1884 businesses audited.

REPUTATION LEVEL

LOWER REPUTATION THAN AVERAGE

Nintendo (Paper Mario) has 32.5 points less reputation than the average for Arts, Culture & Entertainment.

EXPERT VERDICT

A total forensic void. The site fails to provide a single byte of substance, creating a maximum distance between the brand's potential authority and its actual digital proof. The BS here is not 'hot air' but a complete failure to deliver any signal at all.

[See how to improve >](#)

INFO DENSITY

Power-words vs. Substance ratio.

5

17% Reputation

The provided evidence contains a char_count of 0, indicating a complete absence of information. No H1 through H6 headings exist, meaning the heading fluff saturation is effectively 100% non-substantive by omission. The body substance ratio cannot be calculated due to the lack of text, representing a total failure to provide specific claims, numbers, or named entities. Consequently, the specificity absence is absolute, with zero instances of measurable evidence provided in the crawl.

SEMANTIC COHERENCE

Homepage promise vs. Sub-page reality.

0

0% Reputation

The primary signal of the URL indicates a focus on a specific entertainment property, yet the substance delivered on the homepage is non-existent. There is a complete mismatch between the brand authority of Nintendo and the empty forensic data provided for this slot. The heading hierarchy is non-existent, preventing any logical story or service description from being communicated to the user. Because no sub-pages or secondary signals were captured, the cross-page consistency cannot be verified, resulting in a maximum penalty for signal-substance disconnect.

TRUST & PROOF

Verifiable evidence vs. Trust Theatre.

15

75% Reputation

DIAGNOSIS: TRUST THEATRE

The review_count is 0 and the proof_links_count is 0 across the provided data, meaning no active 'trust theatre' is being staged. However, the site fails to provide any external proof paths, third-party validation, or verified credits. This complete absence of outbound evidence results in a total lack of the trust signals expected in the entertainment industry.

EVIDENCE: PROOF DENSITY

The ratio of verifiable evidence to claims is null because no text is available for analysis. There are zero proof points provided across the analyzed page to support any potential business claims. This results in a high score for proof path absence as defined in the forensic framework.

COMMODITY FINGERPRINT

Detection of industry cliches/templates.

10

67% Reputation

The site lacks any unique value proposition in the provided forensic data because it contains zero text matches for industry specifics. Without specific content, the 'identity' of the page is a blank template that could be applied to any generic placeholder. This results in a high penalty for uniqueness, as there is no specific positioning or 'artistic vision' demonstrated to differentiate the brand from competitors.

IDENTITY & AUTHORITY

Expert verifiability & Schema depth.

5

33% Reputation

DIAGNOSIS: AUTHORITY GAPS

There is no schema_json or Person schema to verify the authority of the entity or its creators. The technical implementation shows a complete failure of heading hierarchy and structured data, which contradicts the expected technical excellence of a global entertainment leader. No sameAs links or digital footprints for experts are present in the provided crawl data.

EVIDENCE: PERFORMANCE VS. CLAIMS

While no specific marketing claims are made, the performance of the website as a functional communication tool is at zero. The disconnect exists between the high-authority Nintendo URL and the total lack of content demonstrated in the forensic data. This void represents the ultimate gap between the brand's 'Signal' and its 'Substance'.

INDUSTRY MATCH & SCORE SUMMARY

Arts, Culture & Entertainment Reputation: Nintendo (Paper Mario)
(papermario.nintendo.com)

Reputation: 35 / 100

INDUSTRY CLASSIFICATION

The domain suggests a major gaming and entertainment franchise, which aligns with the Arts, Culture & Entertainment industry classification. However, the total absence of text in the provided forensic data makes it impossible to confirm specific industry markers like artistic excellence or cultural programming.

"The score is primarily driven by the Information Density and Semantic Coherence pillars, which both reflect the total absence of content in the crawl. A score of 35 indicates high BS because the 'distance between claim and substance' is infinite when substance is zero. The identity and authority gaps further contribute to the score due to the lack of structured data or technical hierarchy."

ANALYSIS DISCLOSURE & SOURCE ATTRIBUTION

This analysis is part of a non-adversarial audit conducted by 1 Euro SEO. The results are intended as professional feedback to help improve any website's machine-readability and authority signals. The evaluation is free, and any company can request a fresh audit at any time.

Any company can use the insights for free and improve its voice. When a company has updated its content, it can always submit a new audit request, which will be reflected in a new current score.
