

# AI Reputation Analysis and Signal Evaluation - Popcorn Time

## BRAND AI REPUTATION

### Arts, Culture & Entertainment Reputation: Popcorn Time (popcorn.time.app)

https://popcorn.time.app

Industry: Arts, Culture & Entertainment

REPUTATION LEVEL

## ARTS, CULTURE & ENTERTAINMENT

### 67.5 Avg Reputation

Based on 1884 businesses audited.

#### HIGHER REPUTATION THAN AVERAGE

Popcorn Time has 2.5 points more reputation than the average for Arts, Culture & Entertainment.

## EXPERT VERDICT

Popcorn Time avoids most bullshit traps by anchoring its relaunch in technical transparency and historical honesty. The pivot from a grey-market disruptor to a legal Rust-powered directory is supported by specific architectural claims rather than vague marketing platitudes.

## INFO DENSITY

Power-words vs. Substance ratio.

22

73% Reputation

The site exhibits high information density for a software project, avoiding the usual fluff-to-substance ratio of most streaming apps. While headings like Beautiful Interface and Everything for the best experience are generic, the body text provides specific technical nouns such as Rust-based engine, ffmpeg lib, and GraphQL database. This technical specificity anchors the value proposition in engineering reality rather than marketing vaporware. The FAQ section further strengthens this by providing granular answers regarding cloud subscriptions and local media management.

## SEMANTIC COHERENCE

Homepage promise vs. Sub-page reality.

17

85% Reputation

There is minimal semantic drift between the homepage signal and sub-page substance. The H1 Popcorn Time and hero promise of a simplified relaunch are consistently supported by the About and Blog pages, which detail the transition from the 2013-2015 era to a legal directory model. Unlike most sites where the homepage promises a revolution and the sub-pages deliver a generic service, this site maintains a focused narrative on its new role as a legal hub for aggregated content from platforms like Netflix and Disney+.

## TRUST & PROOF

Verifiable evidence vs. Trust Theatre.

11

55% Reputation

### DIAGNOSIS: TRUST THEATRE

The site contains moderate trust theatre elements, notably in the review\_count data which shows 11 to 12 reviews across pages despite a proof\_links\_count of only 1. These reviews appear as unverified numbers without direct paths to third-party platforms like Trustpilot or the App Store. However, the presence of a registered trademark (USPTO 88353065) and links to external authorities like Wikipedia and Reddit provide a level of institutional proof that partially offsets the unverified review counts.

### EVIDENCE: PROOF DENSITY

The ratio of evidence to assertions is high compared to industry peers. For every vague claim of excellence, the site offers a technical specification (built-in transcoder powered by ffmpeg) or a historical anchor (paused development in 2015). The presence of the USPTO trademark number and sameAs links to Wikipedia and Reddit provide external validation that supports the site's narrative of a legitimate relaunch.

## COMMODITY FINGERPRINT

Detection of industry cliches/templates.

9

60% Reputation

The site uses several template fingerprints common to software launches, such as Frequently asked questions, From the blog, and Branding Guidelines. While it uses industry clichés like seamless streaming and tailored content, the specificity of its Rust/GraphQL tech stack differentiates it from a copy-paste commodity site. The value proposition—a legal, open-source aggregator of 800+ platforms—is distinct enough to avoid being easily swapped with a competitor's messaging.

## IDENTITY & AUTHORITY

Expert verifiability & Schema depth.

11

73% Reputation

### DIAGNOSIS: AUTHORITY GAPS

Authority is primarily established through technical transparency rather than individual experts. While the site claims to be open source and community-driven, it lacks specific names of lead developers or maintainers, which would normally be found in Person schema. The technical credibility is high due to the mention of specific libraries and frameworks (ffmpeg, Rust), but the absence of named authorities with a digital footprint (sameAs links for people) creates a minor transparency gap in its identity.

### EVIDENCE: PERFORMANCE VS. CLAIMS

The marketing tone is surprisingly restrained, though the claim of aggregating from more than 800 of the most reputable streaming platforms is a massive performance claim that lacks a full verifiable list. The assertion that it revolutionized streaming in 2013 is historically verifiable, but the current claim of having a Rust-based engine that ensures the platform is fast and reliable remains a marketing assertion until the app is fully accessible to the public (indicated by the Early access prompts).

## INDUSTRY MATCH & SCORE SUMMARY

Arts, Culture & Entertainment Reputation: Popcorn Time (popcorn.time.app)

Reputation: 70 / 100

### INDUSTRY CLASSIFICATION

The site aligns with the Arts, Culture & Entertainment industry through its focus on media aggregation and streaming. However, its core identity is increasingly defined as a SoftwareApplication, prioritizing technical infrastructure over creative programming.

*"The score of 70 reflects a site with high technical substance but moderate trust theatre due to unverified review counts. The Information Density (8/30) and Semantic Coherence (3/20) pillars performed exceptionally well, while Trust and Proof (9/20) and Commodity Fingerprint (6/15) drove most of the remaining score due to template language and missing external links to code and reviews."*

### ANALYSIS DISCLOSURE & SOURCE ATTRIBUTION

This analysis is part of a non-adversarial audit conducted by 1 Euro SEO. The results are intended as professional feedback to help improve any website's machine-readability and authority signals. The evaluation is free, and any company can request a fresh audit at any time.

Any company can use the insights for free and improve its voice. When a company has updated its content, it can always submit a new audit request, which will be reflected in a new current score.
