

AI Reputation Analysis and Signal Evaluation - yugioh-card.com

BRAND AI REPUTATION

Arts, Culture & Entertainment Reputation: yugioh-card.com (yugioh-card.com)

https://yugioh-card.com

Industry: Arts, Culture & Entertainment

REPUTATION LEVEL

ARTS, CULTURE & ENTERTAINMENT

67.5 Avg Reputation

Based on 1884 businesses audited.

LOWER REPUTATION THAN AVERAGE

yugioh-card.com has 42.5 points less reputation than the average for Arts, Culture & Entertainment.

EXPERT VERDICT

A total digital failure. The site provides zero substance, zero information density, and zero brand authority, functioning only as a technical error page.

[See how to improve >](#)

INFO DENSITY

Power-words vs. Substance ratio.

5

17% Reputation

The heading fluff saturation is at 100% because the only heading, [H1] Not Found, provides zero business information. The body substance ratio is non-existent, with 62 characters of standard server error text and zero specific nouns, numbers, or named entities. Specificity absence is maximum as there are zero instances of dated results, technical specifications, or named frameworks.

SEMANTIC COHERENCE

Homepage promise vs. Sub-page reality.

0

0% Reputation

There is a complete signal-substance alignment failure because the primary signal (the URL) implies a card game brand, while the content delivers a 404 error. Cross-page messaging consistency cannot be evaluated due to the lack of sub-pages, which is the ultimate drift from a functional web presence. The heading hierarchy is incoherent, consisting of a single error message that fails to explain the business purpose.

TRUST & PROOF

Verifiable evidence vs. Trust Theatre.

15

75% Reputation

DIAGNOSIS: TRUST THEATRE

The review_count and proof_links_count are both 0, indicating a total absence of trust signals. While there is no trust theatre flag triggered, there is also no proof path available for any potential claims. The site provides zero external validation or links to third-party verification.

EVIDENCE: PROOF DENSITY

The ratio of verifiable evidence to claims is 0:0, representing a total proof vacuum. The site lacks any of the proof_expectations defined for the industry, such as a programming calendar or artist credits. There are 0 proof points provided across the entirety of the crawled data.

COMMODITY FINGERPRINT

Detection of industry cliches/templates.

5

33% Reputation

The site's content is a 100% match for standard server error templates, which is the ultimate commodity fingerprint. The value proposition is non-existent, and the copy-paste potential is absolute as this text appears on millions of broken pages. There are no industry-specific jargon matches because there is effectively no industry content.

IDENTITY & AUTHORITY

Expert verifiability & Schema depth.

0

0% Reputation

DIAGNOSIS: AUTHORITY GAPS

There is no schema_json present to establish brand identity or industry authority. The technical credibility gap is maximum, as a site claiming to represent a major entertainment entity is currently returning a 'Not Found' status on its primary URL. No expert team members or founders are referenced, leaving zero digital footprint to verify.

EVIDENCE: PERFORMANCE VS. CLAIMS

While the site makes no specific performance claims, the technical failure itself creates a disconnect between the brand's expected status and its actual digital evidence. There are no case studies, results, or named clients to provide substance to the URL's brand promise. The marketing tone is replaced by a cold, automated server error.

INDUSTRY MATCH & SCORE SUMMARY

Arts, Culture & Entertainment Reputation: [yugioh-card.com](#)
([yugioh-card.com](#))

Reputation: 25 / 100

INDUSTRY CLASSIFICATION

The provided crawl data shows a 404 Not Found error, providing no evidence of the Arts, Culture & Entertainment industry classification. There is a total mismatch between the expected entertainment content and the actual server response.

"The score is driven by the total absence of information (Information Density) and the technical failure to deliver any promised signal (Semantic Coherence). The lack of identity markers and evidence paths

contributes to the high BS score, as there is no substance to verify against the brand's implied signal."

ANALYSIS DISCLOSURE & SOURCE ATTRIBUTION

This analysis is part of a non-adversarial audit conducted by 1 Euro SEO. The results are intended as professional feedback to help improve any website's machine-readability and authority signals. The evaluation is free, and any company can request a fresh audit at any time.

Any company can use the insights for free and improve its voice. When a company has updated its content, it can always submit a new audit request, which will be reflected in a new current score.
