

# AI Reputation Analysis and Signal Evaluation - Foody

## BRAND AI REPUTATION

### Food, Restaurants & Delivery Reputation: Foody (foody.com.cy)

https://foody.com.cy

Industry: Food, Restaurants & Delivery

#### FOOD, RESTAURANTS & DELIVERY

### 57.6 Avg Reputation

Based on 2707 businesses audited.

REPUTATION LEVEL

#### LOWER REPUTATION THAN AVERAGE

Foody has 6.6 points less reputation than the average for Food, Restaurants & Delivery.

#### EXPERT VERDICT

The site is a technical ghost that fails to project any substance or industry authority. It currently functions as a digital barrier rather than a commercial enterprise, offering zero forensic evidence to support its existence in the food sector.

[See how to improve >](#)

#### INFO DENSITY

Power-words vs. Substance ratio.

15

50% Reputation

Information density is at an absolute minimum with a char\_count of 0, indicating a complete failure to provide substantive content. While no power words are used due to the absence of text, the lack of specific nouns, numbers, or named entities results in a maximum penalty for specificity absence. The body substance ratio is effectively zero as no claims are made to support the brand's implied food delivery services.

#### SEMANTIC COHERENCE

Homepage promise vs. Sub-page reality.

7

35% Reputation

The site exhibits total semantic drift as the primary signal of the URL (Foody) is completely contradicted by the content, which delivers a bot-challenge instead of food services. There is no H1 or hero section to establish a value proposition, creating a maximum disconnect between expectation and delivery. Without sub-pages to evaluate, the homepage stands as an incoherent entry point for a service business with no logical heading hierarchy.

## TRUST & PROOF

Verifiable evidence vs. Trust Theatre.

15

75% Reputation

### DIAGNOSIS: TRUST THEATRE

Review counts and proof links are both zero, meaning no trust signals?legitimate or otherwise?are present. The site fails to meet any proof expectations such as food hygiene ratings, allergen information, or verifiable customer feedback. The total absence of content prevents the detection of trust theatre flags but highlights a complete lack of verified proof paths.

### EVIDENCE: PROOF DENSITY

Proof density is at the absolute minimum of zero because there is no verifiable evidence provided in the crawl. There are no links to third-party review platforms, no ingredient sourcing transparency, and no culinary credentials. The ratio of evidence to assertions is undefined due to the complete lack of content.

## COMMODITY FINGERPRINT

Detection of industry cliches/templates.

9

60% Reputation

The page is a textbook example of a commodity fingerprint, consisting entirely of a generic technical challenge template. The value proposition is non-existent and could be found on any bot-protected domain regardless of the industry. The template language used is a standard boilerplate block with zero specific brand content or unique positioning markers.

## IDENTITY & AUTHORITY

Expert verifiability & Schema depth.

5

33% Reputation

### DIAGNOSIS: AUTHORITY GAPS

There is no JSON-LD schema or metadata to establish the legal or commercial identity of the brand or its experts. Technical credibility is severely undermined by the failure to present a functional website to the crawler, creating a significant authority gap. No founders, chefs, or team members are named, leaving the entity without any verifiable digital footprint.

### EVIDENCE: PERFORMANCE VS. CLAIMS

While no explicit performance claims are made in the text, the total lack of a menu or delivery metrics contradicts the baseline requirements for a food delivery platform. This creates a functional disconnect where the site fails to demonstrate any capability to perform its primary business function. The absence of substance is itself a failure of the brand's implied performance signals.

## INDUSTRY MATCH & SCORE SUMMARY

Food, Restaurants & Delivery Reputation: Foody (foody.com.cy)

Reputation: 51 / 100

### INDUSTRY CLASSIFICATION

The site is classified under Food, Restaurants & Delivery, but the provided content is a technical challenge page ('Just a moment...'). This represents a catastrophic mismatch between the expected commercial service of a food platform and the delivered user experience.

*"The score of 51 is driven by the total absence of information and semantic drift between the URL and the content. While the site avoids high jargon penalties by having no text, it is heavily penalized for technical gaps and the complete lack of verifiable proof paths or entity identity."*

#### **ANALYSIS DISCLOSURE & SOURCE ATTRIBUTION**

This analysis is part of a non-adversarial audit conducted by 1 Euro SEO. The results are intended as professional feedback to help improve any website's machine-readability and authority signals. The evaluation is free, and any company can request a fresh audit at any time.

Any company can use the insights for free and improve its voice. When a company has updated its content, it can always submit a new audit request, which will be reflected in a new current score.
