

# AI Reputation Analysis and Signal Evaluation - Shadowcast

## BRAND AI REPUTATION

### IT Services, Hosting & Managed Services Reputation: Shadowcast (shadowcast.io)

https://shadowcast.io

Industry: IT Services, Hosting & Managed Services

REPUTATION LEVEL

## IT SERVICES, HOSTING & MANAGED SERVICES

### 54.4 Avg Reputation

Based on 786 businesses audited.

#### LOWER REPUTATION THAN AVERAGE

Shadowcast has 8.4 points less reputation than the average for IT Services, Hosting & Managed Services.

## EXPERT VERDICT

Shadowcast is a masterclass in deep-tech cosplay, using sophisticated terminology like agentic AI and multi-agent orchestration to mask a complete lack of verifiable project history. It presents as an elite engineering firm while hiding behind anonymous case studies and unverified review counters, creating a high-gloss facade with zero architectural substance.

[See how to improve >](#)

## INFO DENSITY

Power-words vs. Substance ratio.

16

53% Reputation

The Information Density is diluted by high fluff headings such as SOFTWARE THAT THINKS and SYSTEMS THAT EVOLVE. While the Engineering page provides a credible technology stack (PyTorch, TensorFlow, Unity), the Visual Arts page is almost entirely devoid of specific details, relying on generic service descriptors like Storyboards, animatics and previsualization. The body text often slides into buzzword-heavy phrasing such as human-level conversational intelligence and agentic intelligence stack without citing specific proprietary benchmarks.

## SEMANTIC COHERENCE

Homepage promise vs. Sub-page reality.

16

80% Reputation

Semantic drift is relatively low as the homepage promise of a deep-tech engineering studio is supported by technical sub-pages for AI and Engineering. However, there is a minor disconnect between the claim of serving global brands and enterprise teams on the homepage and the total absence of any identifiable enterprise client logos or names in the sub-page case studies. The heading hierarchy is slightly incoherent, with the Homepage missing an H1 and instead utilizing H3 for its primary value propositions.

## TRUST & PROOF

Verifiable evidence vs. Trust Theatre.

3

15% Reputation

### DIAGNOSIS: TRUST THEATRE

The site exhibits significant trust theatre; the homepage claims a `review_count` of 16 and the AI page claims 14, yet the `proof_links_count` is 0 across the entire domain. There is no way for a user to verify these reviews. Furthermore, the single named testimonial from Chandan Dhiman at Digital Catapult is used to anchor the site's credibility, but it is not linked to any external validation or project-specific results.

### EVIDENCE: PROOF DENSITY

The ratio of verifiable evidence to claims is extremely low. Beyond the mention of Digital Catapult, there are zero named clients, zero links to code repositories, and zero project-specific metrics. The site contains 1404 characters on the homepage and over 7000 on the AI page, but the only 'proof' offered is a list of technologies any developer can claim and a set of stock images described in the alt-text as professional people in business attire.

## COMMODITY FINGERPRINT

Detection of industry cliches/templates.

6

40% Reputation

The site relies on generic industry templates for its technology stack and services sections. Phrases like Let's Build What's Next and future-proof by design are standard cliches in the custom software development space. The case study structure (Overview, Challenge, Solution, Impact) is a classic template fingerprint that, while structured, contains no specific measurable metrics beyond vague claims like commercial impact and human-level nuance.

## IDENTITY & AUTHORITY

Expert verifiability & Schema depth.

5

33% Reputation

### DIAGNOSIS: AUTHORITY GAPS

There is a massive authority gap regarding the team and technical leadership; no founders or engineers are named, and there is no Organization schema to link the entity to a digital footprint. The schema\_json is poorly implemented, using a generic LocalBusiness type with a missing description and no sameAs links to LinkedIn, GitHub, or professional directories. This lack of a human face contradicts the claim of being a senior engineering team from day one.

### EVIDENCE: PERFORMANCE VS. CLAIMS

Shadowcast makes bold performance claims, such as building enterprise-scale platforms with operational reliability, yet provides zero evidence of such systems in production. The case study for the AI Actress mentions a fully operational AI actress but does not provide a name or a URL where this personality can be engaged, making the claim of human-level conversational intelligence impossible to verify.

## INDUSTRY MATCH & SCORE SUMMARY

**IT Services, Hosting & Managed Services Reputation: Shadowcast (shadowcast.io)**

**Reputation: 46 / 100**

### INDUSTRY CLASSIFICATION

The site content suggests a specialization in AI and Spatial Computing Development rather than the prompt-assigned IT Services/Managed Hosting category. This creates a fundamental disconnect as the site lacks standard MSP proof markers such as SLAs, data center locations, or security certifications (ISO 27001).

*"The score is primarily driven by the Trust and Proof pillar (17/20) due to the presence of unverified review counts and the total absence of proof links. Authority Gaps (10/15) and Information Density (14/30) also contributed significantly, as the site makes elite technical claims without providing any identifiable human or institutional authority to back them up."*

### ANALYSIS DISCLOSURE & SOURCE ATTRIBUTION

This analysis is part of a non-adversarial audit conducted by 1 Euro SEO. The results are intended as professional feedback to help improve any website's machine-readability and authority signals. The evaluation is free, and any company can request a fresh audit at any time.

Any company can use the insights for free and improve its voice. When a company has updated its content, it can always submit a new audit request, which will be reflected in a new current score.
